The underlying technology is a combination of technology from Autodesk's Real-time Web Services and technology

from Autodesk's Add-on Authoring Environment. The Autocad Authoring Tools (also known as AAT) provides a scalable back-end for building extensions to AutoCAD. The back-end provides a SQLite database and is available on embedded systems and desktop systems. AAT (Autocad Authoring Tools) includes an Autocad Runtime Environment which runs on the host computer and a sandbox/bundle (repository) of the application's extension. The AAT framework has three main layers: 1. The runtime is the complete engine for building extensions to AutoCAD. AAT includes the runtime plus a build system that builds the Autocad Authoring Tools. 2. The AAT sandbox (bundle) is a repository of user-provided extensions to AutoCAD. The AAT sandbox repository is a pure zip archive that can be deployed anywhere along with the Autocad Runtime Environment and Autocad Authoring Tools. 3. The AutoCAD Application Suite (Autocad 2013) is a client application that uses the Autocad Authoring Tools (AAT) and sandbox to build new extensions to AutoCAD. The Autocad Application Suite (AAT) runtime is built using web services. The AAT runtime and the Autocad Application Suite (AAT) form a two-component system that can be deployed to desktops, tablets, and embedded systems. The Autocad Authoring Tools (AAT) have three components:

Using the autocad software Open Autocad 2016 and then click File, Open. A dialog box will appear. In the drop down menu, select a package file. After the package file is loaded, you can exit Autocad by selecting File, Exit. AutoCAD will load the.edml (Envelope Document Markup Language) file. This will then add all the envelope objects to the drawing. Create your own master envelope by using the add envelope tool, and then add the parts of the cover and cover lip to the master envelope. Change the design properties of the created master envelope. After you have added the master envelope, you can add the lower part of the cover and the side part of the cover lip. You can also add the part of the saddle and the handle to the design. Add the other parts of the cover lip (if you have created them in the previous step). Save the.edml file (Autocad) Export the.edml file as a.DWG file Import the.DWG file into your Autodesk Autocad to create your own cover. A.EDW file will be created. This file will be used to assemble and print the cover. To create a custom model of your own cover Open your design file (Autocad) Cut the cover parts Now open the.EDW file and cut the parts as needed If you want to print your cover, you will need to export your design as a 3D model (Autocad or 3DStudio) and then print it. InDesign: Creating a custom pattern Step 1: Set Up a New InDesign Document Open InDesign Select File, New Select Blank Page, landscape format Name the file cover.indd Step 2: Create the Pattern Cover
