Go to your preferences and on the status bar, you have a menu of what option, view, preference and model. You must select your option to activate Cheers A: What are you trying to do? I have experience with Autodesk AutoCad - the interface is indeed different. Some of the "menu" options are different. The "Preferences" menu should have a "status bar" (appears as a 3-line menu on the left side of your screen). This menu will let you select your options (view, preferences, status, etc.). I don't have access to a Windows PC to use the program myself. Q: Does a JDBC batch-size statement translate to a statement per connection in JDBC? The JDBC tutorial says: The number of rows inserted by a single statement is limited to the number of statement-level batch-size (normally 100). Does this mean: A single statement can insert up to 100 rows Every statement opens a connection to the database Or is this just a "rule of thumb"? A: The statement is executed within one transaction, meaning all statements within a transaction are part of the same operation. This means that a batch size of 100 statements implies a statement-level batch size of 100. A connection is per application instance. A statement is executed within one transaction. That means that a batch size of 100 statements implies a connection-level batch size of 100. But it may also be the case that one connection can service multiple users, possibly with multiple concurrent processes (if using connection pooling), and each statement gets executed for each such user/process. A small portion of me will always love the idea of running around with a gun and driving like a lunatic in a car. There is something liberating about stepping on the gas with the wail of the powerful exhaust before whipping the wheel. I'll never tire of the sound. But that small portion of me is getting old. What began as a thrill and a rush of adrenaline when I was younger is now just a game of frustration. Not because of the old, tired engine that feels like it would be better spent back in the garage, but because it is just so damn hard to get any speed out of a car these days.

Markup import works for all supported markups – DXF, DWG, DWF, PDF, PNG and SVG (see Autodesk 360 Support article for more information on those formats) – and can export to all of the file types of the supported markups. In addition, PDF import works with all versions of AutoCAD from 2016 and newer, and allows you to choose which part of the page to import as well. Markup assist helps you integrate feedback by automatically placing a version in your drawing based on the information you provide, instead of requiring you to create a new version. It also enables you to create conditional changes to your drawing based on the feedback you receive, and includes version history to track the multiple versions of your drawing that are based on the feedback. Conditionals: Use conditionals to group multiple drawing changes, so they appear as a single change in the drawing. (video: 1:40 min.) Autodesk 360, Dynamic Input and Dynamic Input for Rectangles: Autodesk 360 and Dynamic Input for rectangles include new tools to design and create a series of changes and track them together. For example, you can link changes with a dynamic link, apply the same change multiple times, and manage each change in a version history. In addition, Dynamic Input for rectangles includes interactive guides and more than 60 new annotation tools that you can use to quickly add annotations to drawings and then track them in your design. AutoCAD Dynamic Input is available for AutoCAD 2018 and 2019. AutoCAD Dynamic Input for rectangles is available for AutoCAD 2020 and 2021. Multimedia: With native support for Sintel, Flash, Silverlight, and HTML5 animation, you can create animated videos and drawings, or insert multimedia content, such as Flash, video, PDF, or autoCAD import, into your design. Use the Video Library to preview and import the animations, or insert them in drawings by calling the Insert Multimedia command. Multimedia is available for AutoCAD 2018, AutoCAD 2019, AutoCAD LT 2018, AutoCAD LT 2019, and AutoCAD LT 2020. Graphics Performance: You can increase drawing performance by using the Compute command to optimize your drawings and hide object instances to conserve memory. This command includes many new features to help you efficiently create graphics. You can now copy a mesh
