4.36 MB How To Make Video For Facebook Upload  
FreeQ: A Pointing CSS Animation? I have a div containing an image and I would like the div to face the direction of the browser's mouse pointer. I know how to make it go left or right using translateX, but what I want to achieve is to make it facing the pointer.

I have attached an image to show what I mean.

Thanks in advance. A: If you want it to start at the place the mouse pointer was at, then the css will have to do the work. You could, for example use the

following, where the right property starts at right = 100% and the left starts at right = 0%: .container { width:100px; height:100px; background:blue; position:relative; transform:rotateY(50deg); transform-origin:bottom right; -webkit-transform-origin:bottom right; }

Six-year follow-up of cervical smears in staff of a large public hospital. Cytology procedures are controversial due to concerns about the safety of human subjects. We assessed the impact of repeated cervical smears on the staff of a large public teaching

hospital. We also describe the subjective and objective findings. The records of 974 staff members who had attended the hospital's cytology laboratory for cervical smears between 1975 and 1980 were reviewed for type of smear, referral status, and the results. Other information was obtained from semi-annual interviews. The female patients were

interviewed by telephone. Only women aged 23 to 61 years were included in this analysis. There was a total of 48,292 smears examined by staff during the 6 years, with 30,000 smears (62%) being Pap smears.

There was a high rate of repeat Pap smears (16.3%). The rates of abnormal and unsatisfactory smears were 12.5% and 8.4% respectively. Rates of repeat

unsatisfactory smears were 9.8%. Staff members were less likely to have repeat abnormal smears after receiving adequate counseling (odds ratio = 0.47, 95% CI: 0.40, 0.56). Forty-six percent of staff

---

members who had a repeat Pap smear had a repeat abnormal smear. Of the repeat abnormal smears,
