... is a poor imitation of the Leitz AL F's so I'm sure you can find one with the Leica AL F's used on the Leica picture, but I only have the one used on the Leica picture so I don't know.. I did however find it easier to not have the negative space and run the baton over the print than to have. The best way to get a feeling for a picture is by using its whole range (strength) and relative strength (like by dropping a pendulum, you'll have some idea of the weight of the picture, but you'd never guess that a picture in a frame is worth more than a picture hanging on a wall in a frame). For example: the print of the Leitz AL F has a value of 68 for the most part of the print with the white lines of the hand being around 50, while the picture in the frame has a value of around 110. The best way to get a feeling for a picture is by using its whole range (strength) and relative strength (like by dropping a pendulum, you'll have some idea of the weight of the picture, but you'd never guess that a picture in a frame is worth more than a picture hanging on a wall in a frame). For example: the print of the Leitz AL F has a value of 68 for the most part of the print with the white lines of the hand being around 50, while the picture in the frame has a value of around 110. The print in the frame looks very sharp and has a strong value. The frame is an older frame and the colors have changed a little bit, but the look is still close to how it was around. The print, however has faded, this can be slightly seen in the white area (which is usually the most important part to keep sharp) which is around 200. Even though the print is farger, it has a value of 12 in the whole print (68, 50, 12, 68 in the order of the black line strength), which gives you an idea for the values in a print. The digital print has no values for me, but I found it in the same year it's made, which is always nice. I didn't get around to look for copyright information on the print. The picture is from an SX-70 4x5 camera, which should give you an idea o
