Something like this: R.find({id: id}); //R is "role" C.observe(role, function() { console.log("Updated"); }); Unfortunately the above won't work, because roles is not an array (like find returns). So the question is: Can I use a find query together with observe, even when the collection is not an array? Edit: I'm aware that I can use the "subscription magic" to the find collection, but is there a way to use a find and observe together? A: I found another way to do this, maybe this will help other people too: R.find({id: id}); C.collection.update(R._id, {$set: {"field1": "value1"}}); Instead of calling collection.update, it makes sense to use collection.updateOne(filter, update) (see here) and it works like this: R.find({id: id}).updateOne({$set: {"field1": "value1"}}); Read the opening extract of the brand new Jenna Wortham book below The season of giving is upon us. Operation: Pinkeye For PC [Latest-2022]

Heroes Tactics is a uniquely accessible take on tactical battles that anybody can pick up and play in relatively short order without a lengthy tutorial period.There is a pretty extensive guide at the beginning of the game that explains the mechanics behind the battles pretty well.How to Play: The system is easy to understand and immensely flexible, with no mechanical boundaries between factions and units.While the tutorial is short and doesn't require any prior knowledge of RPGs, there are seven classes to choose from.Each class comes with its own set of skills and combat enhancements, including different ranged and melee attacks and classes like the guardian and assassin that allow players to fight from a distance or stealthily.Packs can be opened to randomly upgrade skills and unlock new content, but the bulk of what you'll want to do is upgrading the various weapons in your inventory.There are three tiers of weapons (common, rare and master), with each tier being more powerful than the one below it, and equipment can be found by completing quests. Gameplay: Players can control up to four heroes at once, each with their own special abilities.The battles are turn-based, meaning each turn has a setup and a resolution phase and usually happens within a limited time frame.The focus here is always on strategic planning and optimal use of resources.Besides the setup and resolution phases, the skirmish also has a variable battle phase, which can last anywhere from a few seconds to over a minute.The length of the battle phase determines whether you can heal any injuries caused during the previous round.There are nine phases of combat to follow: setup, resolution, variable, variable Here are a couple of videos showing how the game plays: Game Mechanics: The hex-grid interface is what gives this game its unique feel.Instead of units, Heroes Tactics relies on hexes, which are the core unit of combat.Each hex can host one hero or a squad of heroes.There are three distinct abilities that can be used by hexes: ranged attacks, melee attacks and special abilities.The effect of each of these abilities is determined by the sign of the hexes that support them and their own strength. Examples: - A ranged hex that gets a ranged attack has a positive affect if it supports a hex with a positive effect sign.The effect is negative if the hex has a negative effect sign. - A ranged

Galaxy Warfighter is a 1993 video game developed by Psygnosis and published by Psygnosis for MS-DOS in January 1993. It is based on the planetoid of the same name and features space combat, planetary exploration, and planetary survival. Gameplay The game's story is in a distant future, known as the Third Era, where the 4th and 5th planets have their solar system ejected to open the way for the first 3 planets to colonize more space. Galaxy Warfighter takes place on 3 planets. "Planet A" is a small barren planet, where you find the base (base design is very similar to Wing Commander: Privateer). "Planet B" is a large planet with forests that you can freely roam around. "Planet C" is where the story starts, where you start the game, in a crashed starship. This starship is the only combat capable vessel in the game. Space combat consists of vastly different, hand-drawn, animated space battles. Exploration is done through one of four different vehicles. Your vehicle can take up to 4 soldiers at a time. You can play as one of the 16 classes, which include an officer, a medical officer, a pilot, and an engineer. Planets A, B, and C can be fully explored, in other words you can travel into deep forests and ruins. The game includes "survival" content, since it's completely possible to lose soldiers. You can purchase extra soldiers to give your soldiers more strength or attempt a rescue mission (its success depends on how strong your soldiers are). On the last planet you can collect resources and build a ship (its design is similar to the first Wing Commander game); in this case its only for rescue. Synopsis At the start of game play, you are thrust into the middle of a war. The space station, is under attack from an unknown attacker and you are ordered to escort a group of civilians away from the war zone. During the escape the communications are mysteriously cut off and subsequently you are re-routed to a world which has been swept clean of its life force, by an unknown attack. By examining the wreckage and survivors on the planet you piece together that this planet was what made contact with the space station in the first place, meaning that this is the same war that you are fighting. Your plot is to figure out why this has happened and what to do about it. The game ends with a close take on the philosophy of super

Like making a coffeeshop reservation, handing over, and then coming back to work hours later. ------ mbrock I recently updated my phone and installed a customized launcher that shows a cards on the screen showing various snippets of code that have been written by other people in the codebase. I can also pin or hide the code snippets. It's a pretty good place to store stuff that you might find difficult to remember or to search in, but it doesn't feel as "real" as pressing CTRL-F or CTRL-K in an editor. Anyway, it's still a work in progress. In vitro antimicrobial activity of chitosan oligosaccharides synthesized by mild chemical methods. Chitosan (CS) is a cationic polysaccharide widely used as a food additive and as a biosurfactant. However, its direct usage as an antimicrobial agent has been limited. To overcome this problem, CS oligosaccharides (CSOs) generated by mild, enzymatic, and/or chemical methods were evaluated for their anti- and antifungal activity against Gram-positive and Gram-negative bacteria and yeasts and also for their antibiofilm-eradicating activity against methicillin-resistant S. aureus (MRSA). Although CSO2 had the strongest antimicrobial activity, CSO6 was the most effective antifungal agent. CSO6 was effective as an antibiofilm-eradicating agent for S. aureus and P. acnes. CSO6 had

Former Senate Majority Leader Bill Frist to be a keynote speaker at UK healthcare conference. When David Squires travels to the UK in February for the Healthcare Conferences trade show, he will be rubbing shoulders with some great British minds. On the convention schedule: a keynote address by former US Senate Majority Leader Bill Frist, whose 'Frist medicine' anti-TPA drug trial has been criticised for a lack of transparency. A panel discussion and special dinner with editor of the Lancet Julian Leister, an opinion pollster Peter Kellner, a clinical professor of nursing at the University of Manchester and a theatre director will also be on the agenda. With 300 attendees, the three-day event is a feeder for those who attend the Health First International Trade Show in Manchester, UK, also in February, which attracts more than 1,500 exhibitors including several pharmaceutical companies. VividSage was a media partner to this and another healthcare show last year. It is also operating seminars for a new North West UK conference this week (10th May) discussing 'transformative change' – the topic of the Frist keynote. VividSage continues to work with the following UK companies on healthcare content programmes
