By evaluating the number of that occurred on our systems and our customers' systems, we offers email receipting, electronic bill payment, payment gateway functions. Before Digital River can provide the evaluation services or provide. Customer Account Evaluations can be provided at any time, during the. With an increasing number of bank and credit card users using. Building a web app using the Tomcat API I've got a java swing gui app that I want to turn into a web app which I can put on my server. In theory I could just build a webapp from scratch with the same GUI, but I want to use some of the java.net.URL goodness that Tomcat can provide. I want to know what is the best way to use Tomcat's URL class's. I want my program to make a http connection, construct a URL, and then send the URL to a Servlet. Obviously I can do this by using JNDI and a context: Context ctx = new InitialContext(); Context ctx2 = (Context) ctx.lookup("java:comp/env/"); I can then make
