The app provides the following CAD-related functions: 2D drafting 2D and 3D technical drawing 2D and 3D architectural drafting AutoCAD Architecture The user can add and edit drawing content, change the properties of the drawings, zoom and pan the view, create layers, enable layer-based visibility and editing, enable cut, copy, and paste operations, and toggle between paper space, AutoCAD space, and 2D orthographic space. A paper space is a 2D drawing canvas that represents a physical, non-AutoCAD space. The user can add and edit text content, such as text, annotations, dimensions, text styles, text blocks, dimensional annotations, and table and graphics. When drawings are presented as a group in the drawing sheet, you can select a drawing in a drawing sheet group to annotate. Browsing and Editing The user can move the cursor around the drawing by using the mouse or by manually pointing and clicking at specific points on the drawing area. Drafting Tools The user can create, edit, and delete drawing objects, such as lines, circles, rectangles, ellipses, polygons, arcs, arc segments, splines, and bezier curves, as well as create dimensions, alphanumeric symbols, and text. AutoCAD includes two types of geometric tools: drafting tools and design tools. Drafting tools are general-purpose tools, such as polylines, splines, and arcs; design tools are specialized tools that are dedicated to the design tasks of drafting, such as circles and rectangles. Navigation and Viewing You can zoom in and out to view the drawing area or a specific part of the drawing area. You can pan the view to move the displayed area. You can use the scissors, arrow, or grid to pan the view. Snap The user can create and edit drawing lines, arcs, and shapes that are designated as "snap points." A snap point allows you to create a geometric object, edit the geometry of the object, and display the point as a geometric object. As the object is edited, it appears at the snap point and can be moved, rotated, and edited. You can use the mouse or manually point and click at a snap point. Cursor Options The user can modify settings such as the grid, grid lines,
