Leslie, P., N. Fogel, W. McLeod, and W. J. Koolen, Editors, Linear Combinatorial Optimization, third edition. Prentice-Hall, Englewood Cliffs, New Jersey, 1998.. Scheduling Theory, Algorithms and Systems. Prentice Hall, Englewood Cliffs, New Jersey, 1988.. Motivated by the above references I would like to ask : Are there any other papers that discuss this subject or any other related paper on the subject of scheduling of tasks on a graph/network/infrastructure? I am looking for papers with : 1) an overview of the major topics in scheduling of tasks on a graph/network/infrastructure 2) any examples of applications of this topic 3) any emphasis on resource management by using heuristics/algorithms/complexity analysis for design of a system or simply explaining the underlying ideas Any help or any links to related work is greatly appreciated. A: This Wikipedia article contains pretty decent information about scheduling on various networks. It also links to some papers where you can find more thorough information about scheduling on different networks. Q: How to override Laravel 5 route values with custom key I've a route in Laravel 5.3, Route::group(['prefix' => 'customers'], function() { Route::get('/', 'CustomerController@api'); }); I want my route api key to be as a parameter of the URL like: How can I achieve this? A: You can do it in two ways: Override the route middleware in app\Http\Kernel.php Route::match(['get', 'post', 'put', 'patch'], 'customers', function(\$request, Closure \$next) { return \$next(\$request); }); Register a route model in route.php Route::model('key', '\App\Models\KeyModel'); Route::get('customers/api/', 'CustomerController@api'); The second solution is recommended and works the same way as the previous.
