Winwedge Pro 31141 Free

[Download]

winwedge pro supports serial data capture from almost any instrument available on the market. it is possible to write a device driver for any serial instrument on the market, but is much more convenient to load and install winwedge pro. winwedge pro includes a set of command line utilities that you can use to communicate with winwedge. these utilities allow you to control winwedge pro via a command line and also allows you to send serial data to any serial instrument. these utilities are very powerful tools that include the ability to talk to winwedge using rs232, rs485, tcp/ip and serial port. to send serial data to any instrument, just create a menu command to open the utility. commands can also be sent to winwedge from within an application. this is useful if you wish to send commands to winwedge from within your own application. you could create a menu command to open the utility, and program winwedge pro to send a control command to your serial instruments. this is useful if you have access to your serial instruments on a tcp/ip network or across ethernet. winwedge pro allows you to simply collect data from any meter, instrument, laboratory device or laboratory measurement system. most serial instruments output a unique communication format. unlike almost every other application available for windows, winwedge pro can read and work with the data from practically any serial instrument on the market, on any windows platform. it does this by working directly with the device itself and not with the device driver. it supports most of the most popular serial instruments on the market.

Winwedge Pro 31141

winwedge pro is designed to be the best solution for collecting data from all kinds of laboratory instruments and devices. it has advanced parsing and filtering capabilities for digital and analog signals. winwedge pro can read data from a large variety of different types of barcode scanners, rfid cards and sensors. it can even take data from handheld devices like the palm pilot. winwedge pro has direct memory access (dma) ports. this allows it to read or write data to memory without waiting for the computer to go to sleep or for the program to exit. this makes it great for collecting data from slow serial devices, like a laboratory balance, like it can keep running while the computer is in sleep mode. the professional edition allows you to collect, filter and format data in your own or third party application right from winwedge. the ability to collect, filter and format data that is directly usable in your own or third party applications is something that none of the other serial i/o tools can offer. the api also includes a wide variety of functions for inputting data from a variety of devices. for example, winwedge can work with the usb bus directly, with the serial port on a mac, with a serial port on windows with an rs232 com adapter, or with a serial port on a pc. one of the most useful tools is a function called winwedge tracker. this allows you to categorize incoming serial data. you can create up to five different custom categories and create rules that define what type of data you want to keep in each category. the names of the categories are not important. the data is sent to only the category you have defined. you can then use the formulas in the category text-parser to manipulate the data and do things like save the data directly to a file and convert it to a comma delimited text file. 5ec8ef588b
