The quickest way to add HDR (High Dynamic Range) to a photo is to shoot more than one exposure of the same scene and merge them with Photoshop's HDR feature. You can also merge RAW images - this technique is more appropriate for landscape photos, in which more than one exposure can be used. HDR images look better after certain filters have been applied, including local adjustments, which change the overall tone of the image. Once you've got HDR images, you can use Photoshop's Lens Correction filter to sharpen and brighten them. In addition, you can desaturate an image and reduce noise with adjustments like Clarity or Sharpen and reduce grain with Noise Reduction. Glitch is controlled by edge coordinates in a Sketch and easily shapes objects. This allows for tools like Parallax to replicate the effect more accurately. Waveform, on the other hand, lets you copy and paste a selection of precise pixels. This can be used to prune out unwanted areas and duplicate problems on an image. If you're looking for a CC tool to make life easier, a Lens Flare Generator is ideal. It has filters like Landscape, Cityscape, and Beach to create a filter that replicates the feeling of a sun-drenched day. Lens Flare also generates a lamp flare to mimic light sources in the sky and sun.

- Share for Review: Introducing Share for Review, a new service in Photoshop that enables registered users to collaborate seamlessly on file reviews with external reviewers on other email platforms. Share for Review allows users to upload photos to Share for Review and review and mark-up Photoshop files. In the future, Photoshop will support other file types, such as Office files and PDFs, and we'll be adding a standalone desktop content viewer for all file types. Share for Review is a free service (for non-commercial users) and a subscription-supported service for commercial users.
- Native web-browser capabilities: Photoshop now has full support for the w3c web browser feature set, including webp image support, web standard font support and web security. Users can drag and drop files directly from their PC hard drive to a web browser for viewing in the cloud, or share, mirror or print files directly from the browser. The files can be viewed in the original resolution or viewed via smart previews.
- Content-aware CMYK (Cyan, Magenta, Yellow and Black) editing: It is now possible to preserve the colors originally captured into a document, as original colors, in the edited digital representation. When making adjustments to the colored elements of a photo, know that the colors you see in the adjustments won't be the same colors you see in the finished product. The original colors will be preserved in the result, so users can easily make accurate corrections to grayscale and Cyan, Magenta, Yellow and Black (CMYK) images.
