What's New In Password Login?

Password Login is a cross-platform, 100% browser-based password generation program with a unique multi-functional <a href=">changelog that can be used to describe the latest version, changes, and additions to Password Login. Password Login uses a domain-based approach to storing passwords to avoid sending passwords in cleartext over the Internet. Technology: Password Login is powered by the fastest growing password hashing function in the world, Bcrypt (It has been proven time and time again to be the safest and most secure password algorithm available). Password Login uses public key cryptography which allows it to be validated by anyone. Features: ⬜ 1Password-like -- Password Login offers the ability to use the 1Password service to generate passwords, plus advanced options for creating strong, unique, and memorable passwords for websites. Password Login also offers the ability to use 2-factor and multifactor authentication. ⬜ Secure randomization -- Password Login can generate multiple passwords. This means that you don't have to remember one password. In fact, you can create multiple login credentials and choose when you want to use them. ⬜ Password generators -- Password Login supports multiple password generators. These include random password generators as well as secure password generators. ⬜ Generate password using images -- Password Login can generate passwords that include text and images. This can be useful when generating strong passwords. ⬜ Secure login using encryption -- Password Login offers a unique Secure Login feature that can use public key cryptography to allow the server to validate that a user is who they say they are. The feature can be used to secure any kind of login, including multi-factor authentication. ⬜ Virtually limitless password size -- Password Login allows you to create passwords as long as you want. You can even create passwords that will never expire. ⬜ Generate Password -- Password Login offers the ability to generate new passwords on the fly. ⬜ Automatic generation -- Password Login can automatically create passwords for your accounts. ⬜ Password generator -- Password Login can be used to create strong passwords for your web applications. ⬜ Password Manager -- Password Login is a password management application. You can use it
