And it's no problem to be able to move images in the Finder, organize your folders in Lightroom, and drag a file from Lightroom into a word processor. Manipulating raw images and creating great looking slideshows is a breeze. The finish is gorgeous. Although it's true that you can't match the quality of a professional retouching program such as Photoshop, Lightroom comes pretty close. The editing tools are intuitive, and having great tools such as layer masks and selection brushes makes your work come alive. You still need to know a few basics but you can do a lot in Lightroom. It's got a great workflow in the workflow part of creating slideshows. Another great thing about Lightroom is that it lets you work with both RAW and JPEG images. You can download a RAW image directly from your camera to process it. Or use a JPEG image you've already shot. You need a more sophisticated RAW converter such as Photoshop or Adobe Camera RAW (ACR) to work on RAW files. But Lightroom lets you edit both RAW and JPEG images together. You can add layers to the RAW image, save the editing results as JPEG, and directly open it in Photoshop. And you can actually do both at the same time. If you switch to JPEG in Lightroom or

Photoshop, you can open existing JPEG files in Lightroom at the same time without losing any of their edits.
