Soundminer Pro V42fc81 Mac OSX-UNION 1 13 0:44.Q: What can we say about a space in which the set theoretic topology is obtained by adding a point to some vector spaces? Let V be a vector space (of dimension ≥ 1) of finite cardinality. Let τ be the smallest set-theoretic topology on V that makes V a vector space. Let us denote by τ' the smallest topology on V that contains τ . What can we say about τ' ? In particular, if $x \in V$ is a point, how do we know that $\{x\}$ is a G_δ in τ' ? We can say that if $W \subseteq V$ is a subspace, then $W \in \tau'$ iff $W \cap V = \emptyset$, because if we can choose a non-empty open set in W , then it is necessarily $W \cap V$ and viceversa. Is there a more precise characterization of
