The one thing in life that you can't expect an organization to give you is money back. While some companies may give you a partial refund for software you paid for after three years, there's no long-term incentive for Adobe to provide a long-term software upgrade cycle. The big companies who start at the top generally leave it to the CIO to spend the company's cash on upgrades such as this. Adobe least wants to be in the position of the CIO. What is it about? Thanks to its superb integration with Adobe's Photoshop/Photoshop Elements products, Nik Silver ef represents a radical new approach to producing super-resolution images. Using subtle variations in the intensity of shadows and highlights in an image, Nik Silver ef is able to create spectacular new, super-resolution images easily. The default high-resolution file size for an image can significantly increase after Nik Silver ef creates an HDR as well as the ability to group related images into a single library for easy selection. Because all of these benefits are generated automatically, Nik Silver ef is a completely hands-off application that produces images in any exposure mode including RAW. This super-resolution power also enables anyone, even graphic artists, to produce stunning images with ease. Then, they can share the stunning images via social media, email or even with printing services. You can also leave comments by sending them to the reviewer via email in the Comments panel. Just select the envelope icon on the upper-right corner of the Comments panel. That kind of gives you more control over a document you're working on, but it can be a bit overwhelming if you've never used it before.
