Adobe Photoshop holds a special place in my heart, since it's one of only just a handful of products the company deserves deference. It's a program that many others admired, sometimes envied, and certainly used. Photoshop ranks with InDesign, Illustrator, and even After Effects when it comes to miscellany of admiration. Whereas all of those programs were folded into the Creative Suite, Photoshop alone remains, and continues to shine. Adobe Photoshop has always been a leader in digital imaging, and its reach has only expanded with CS6. The program without a doubt still remains the standard for the medium, and is the premier choice for visual assets. Photoshop allows any level of a creative user to produce results that meet a group's high expectations. It is hard to rate Lightroom 5.0 without first talking about its predecessor, which will remain compatible with Lightroom 5.0. The previous version has worked well for a wide range of photographers, including professional ones, and I was flattered by Adobe's decision to keep my old work compatible. It is also possible to import some older copy of images within Lightroom 5 and use it for editing. To begin with, the transition from Lightroom Classic CC to Lightroom 5 was smooth. Unfortunately, this wasn't the case with Lightroom 5.0. When it launched, it was the first version of Lightroom in which I experienced many problems, including image selection and loss, synchronization issues, and poor performance on older machines.

One of the most common complaints about photo editing apps is that they don't properly support workflows from another area of your workflow. Whether you're browsing your photo library, making changes to a selection, or working with a client on an image, the software you choose is going to be important to keeping your workflow balanced. Here, we examine which photo editing apps are friendly to workflow and the areas where they fall short, specifically mobile editing apps and for the web. AI and machine learning are more than just buzzwords to Adobe. The company has invested billions in these technologies to connect the biggest brands as digital first, and its aim is to use AI and machine learning to make marketing efforts better, more insightful and more targeted. AI powers Adobe Products including Photoshop and Photoshop Artboard. There's also technology to help with creating virtual reality experiences, video editing, creative collaborations, increasing productivity, and more. For example, it's used by professionals for businesses and universities to spot cancers on x-rays, for scientists to improve drug discovery and in combination with machine learning by data analysts, it can help solve traffic and housing problems.
