A new crop and straighten tool helps you adjust images so that they have the right proportions. The crop tool creates an exact crop of the currently active layer; layers can be removed from the cropped content and even repositioned within the image. After cropping a layer is again selected, and the Free Transform tool allows the user to move and resize that part of the image, like a marquee. The new Content-Aware Crop also offers a seven-step crop sequence that can adjust an image with up to 84 percent overlap, and even work with layers locked. The new auto crop tool compensates for any camera movement and is designed to prevent skewed crops (its recommended usage is explicit images with borders). Photoshop CC 2015 now has a more robust selection and move tool; edges are more consistently detected and more cleanly merged; and the new Content-Aware Selection tool is used to remove unwanted items and improve the selection. Widening the selection only works on vertical or horizontal selections. The "good enough" markup is a drop-down menu that was introduced in Photoshop a few versions ago. It's a list of tools and features users have most frequently noticed and wanted to change. It helps you identify areas—and it also helps Adobe to automatically improve where it counts: Your overall experience. When you first open the tool, you're shown a list of edits and tools that users most frequently used. A plus icon indicates a new feature. Everything you see in the tool is based on what other people tell you is missing.

To make this workflow seamless and easier to create and use, Adobe has added a 3D printing "Designer panel." This panel enables designers to quickly set up a 3D file for printing, create a 3D style, and add customized text or images to 3D assets to create Web-ready 3D objects. Finally, the continuously updated Adobe Camera Raw (ACR) within Photoshop use leading edge AI technology to analyze image adjustments and quickly apply them to any size or quality image, lowering the load on the user and the amount of manual adjustments required. Photoshop has introduced a new Sharing flyout that makes it even easier to collaborate on projects, and collect feedback on images. The new Sharing flyout in Photoshop is supposed to make it easier for independent designers or social influencers to collaborate on Photoshop projects by Streamlining workflow and reducing confusion around the use of different apps. However, this new feature takes creativity away from Adobe's Creative Cloud.

Adobe has also added new analytics and collaboration tools for the community. Users will be able to preview cloud documents in recents in the copyshop and experience the best recommendations for

edits. The project collaboration features in Photoshop make it easier to work with large images and share work with team members outside of Adobe Creative Cloud. Built-in collaborative editing tools allow users to easily assemble a project by combining multiple images, turn a rough sketch into a more refined design, and allow mobile previews of edits after revisions. These tools also make it easier to collaborate on large images across community, as the changes can be collected and reviewed all in one place. Additionally, with overall performance improvements in Photoshop, users can now edit up to 50% more efficiently while untethered to a source device. Photoshop's canvas now supports multithreaded and GPU compositing to improve performance and speed up editing. Last, with a new Picture-in-Picture (PiP) feature, round-trip photo editing is made only once when a user changes the size of an image in Photoshop CC. These updates capture ideas and edits in Photoshop and update them in other applications more rapidly and effectively, allowing team members to communicate faster and collaborate more effectively. The Adobe Sensei team are creating new filters which can be accessed via the Filters > Plugins panel. While the filters aren't finished, they're already pretty slick. They're searching for people to play around with the filters, and invite users to help shape the filters so that the social aspect isn't lost in translation in the social media sphere. The filters work by tracking the direction of people's eyes, allowing them to change their expressions, so for example, turning up the eyebrow, raising it slightly or making a sad face.
