You can create amazing images with just a few taps of a finger. Since Photoshop is a high-end application, the file sizes can vary considerably, depending upon your images and how you are editing (i.e. you can replace your shadow in-place from a sparse brush,

use flags to change the type of blur throughout the image, etc.), so your computer's storage space is likely to be an issue. Another element that adds up to Photoshop's file size is the number of applications and plug-ins you have installed. These programs add up and just like Photoshop, you may find your computer overflowing when you're performing intensive editing with them.
